It is important to use time to get deep expertise, Khosla notes. You need to go much deeper in understanding technology—a bachelor's degree is not enough and will be irrelevant in another 10 years. If you have a goal of entrepreneurship in mind, you must go deep in an expertise in order to advance your career.

But it's important especially during this time when time isn't the premium, money is the premium and you don't have money, you have time.. To use that time to get as deep expertise as possible.. I don't recommend especially if you're going into technology to go start a company with a bachelor's.. I think the bar is much higher and you need to go much deeper in understanding technology and understanding markets and businesses.. I would suggest that whether it's further education, which I am a big, big believer of.. I actually don't think bachelor's is adequate for anything in today's world and will definitely be irrelevant 10 years from now.. The deep expertise is important.. The same is true in terms of jobs.. If you get jobs and look for jobs.. If you have a goal of entrepreneurship in mind you want to go deep and understand things more than advance a career...
