Estrin talks about the three cycles in IT networks:
1) Enterprise productivity cycle
2) Connecting people
3) Connecting devices.

Transcript

So when I look out at kind of where we have come over the last couple of years and next couple of years, I really think of this in terms of three cycles and let me again point out this is not talking about all of technology.. This is really kind of has an IT network-centric view to it.. There are certainly other areas whether it's nanotechnology or other things that life sciences, which are not so much the IT business itself.. But I think about in terms of enterprise productivity cycle and I'll define each one of these, connecting people and then connective devices...
